BloomFilter Operator

Filter the input stream using a Bloom filter on the given attributes.

Parameter

- `attributes:` List of attribute names to filter on.
- `fpp`: Desired false positive probability. (Default: 0.03)
- `insertions`: Number of expected different attribute value combinations. (Default: 500)

Example

PQL

BloomFilter Operator

```
output = BLOOMFILTER({
                  attributes = ['auction', 'bidder']
                }, input)
```
