Permissions

Work in progress ...

#CREATEROLE

Creates a new role with a given name. Permission can be assigned to this role.

```
#CREATEROLE simpleuser
```

#DROPROLE

Drops a role from the system.

```
#DROPROLE simpleuser
```

#GRANTPERMISSION

Grants a set of permissions to a single object, for a user or a role. See Odysseus User Management for more Information about permissions.

```
#GRANTPERMISSION username/rolename operation1 operation2 operation3 ... object
#GRANTPERMISSION otherUser read stop_query nexmark:person
#GRANTPERMISSION public read nexmark:person
#GRANTPERSMISSION otherUser remove_all null // Remark: There a some commands that don't have a target. In this
case, the last parameter can be any value and will be ignored, but must be given!
```

#REVOKEPERMISSIONS

Removes a set of given permissions.

```
#REVOKEPERMISSION username/rolename operation1 operation2 operation3 object
#REVOKEPERMISSION otherUser stop_query nexmark:person
#REVOKEPERMISSION otherUser remove_all null // Remark: There a some commands that don't have a target. In this
case, the last parameter can be any value and will be ignored, but must be given
```

#GRANTROLES

Grant a set of roles to a given user.

```
#GRANTROLES username role
#GRANTROLES otherUser DSUser
```

#REVOKEROLES

remove a set of roles from a given user.

```
#GRANTROLES username role
#GRANTROLES otherUser DSUser
```
