

# DatabaseSource

This operator can be used to access a database.

## Parameter

- connection: The name of an existing database connection (see [Database Feature](#) how to create one)  
Or:
- type: The JDBC connection type (e.g. mysql)
- db: The Database to access
- user: The username for the database
- password: The password for the user
- host: The hostname of the database
- port: The port of the database connection  
Or:
- jdbc: The jdbc connect string
  
- table: Which table should be read
- attributes: Which attributes should be read
- waitEach (long, Milliseconds): How long to wait between the reading of two elements from the connection
- escapeNames (boolean): If given, the names will be escaped with "

## Example

can be found under [Database Feature](#)
