

# How to report a bug

I found a bug, what should I do?

As any software also Odysseus might have some bugs. If you ever encounter one of these bugs or just expect another behavior please be so kind and fill out a bug report. To do so select the menu item Help -> "Send Bug Report" in the menubar as shown in the right image.

After that, a dialog window will pop up. Please answer the questions in the dialog window to give us a chance to reproduce the bug. In addition, the bug report contains information about your system, the current Odysseus installation and running processing queries. This information might contain private or other confidential information so please review the bug report before submitting. Also consider to insert your email address so that we can ask additional questions regarding the bug or to inform you as soon as the bug is fixed.

Send bug report

### Odysseus Bug Report

Please answer the questions and look through the generated report before sending the bug report.  
The more information you can provide, the more we can improve Odysseus.

**Detail Information** | Report Information

Title of your report  
Odysseus Bug Report

If you want a reply please enter a valid e-mail adress  
Test@test.de

What led up to the situation?

What exactly did you do (or not do) that was effective (or ineffective)?

What was the outcome of this action?

What outcome did you expect instead?

You can add your JIRA account (ask for one at [odysseus\[at\]uni-oldenburg.de](mailto:odysseus[at]uni-oldenburg.de)) and each report is assigned to you directly.

In addition, you can send a bug report when Odysseus complains about an occurred problem during query parsing or processing as shown in the figure below. In this case, the bug report will also contain the reported execution error.

Problem Occurred

'Parsing and Executing Query' has encountered a problem.

Script Execution Error: PQL could not be correctly parsed!  
This is, because PQL found "=" after "schema" and "=" is not an allowed  
value here!

However, PQL expects one of the following tokens after "schema": "("
