

OdysseusNet Perspective

(currently work-in-progress)

The OdysseusNet-Perspective is a graphical user interface integration of OdysseusNet into Odysseus. It provides a (currently small) collection of views for using, viewing and managing OdysseusNodes (and the network):

- [ChatView](#): Send text messages to other users
- [DistributedDataView](#): Overview of distributed data
- [NodeView](#): Overview of all known (and connected) remote OdysseusNodes
- [PingMap](#): Graphical view of estimated connection qualities between nodes (e.g., latencies)
