Run with Docker

New (19.06.2020): You can download Odysseus server now directly from the dockerhub

```
docker run -d -p 8888:8888 odysseusol/odysseus
```

If you want to create your own Odysseus Docker Container, see Create an Odysseus Docker Container.

You could also start interactive (and use the osgi console):

```
docker run -it -p 8888:8888 odysseusol/odysseus
```

The ODYSSEUS_HOME will be used as a volume.

The following will bind the odysseus home to H:\docker\odyhome1

```
docker run -p 8888:8888 -it -vH:\docker\odyhome1:/var/lib/odysseus odysseusol/odysseus
```

If you want to use the latest development images, place "dev-" as first part of the tag:

```
docker run -d -p 8888:8888 odysseusol/odysseus:dev-latest
```
