XML protocol handler

The XML protocol handler parses XML documents and extracts attribute values using XPath expressions.

Options

- **delay**: Delay of reading in milliseconds (default 0).
- **nanodelay**: Delay of reading in nanoseconds (default 0).
- *Attribute*: XPath for the attribute in the document.

Example

PQL

XML Protocol Handler

```
input = ACCESS({source='Web', wrapper='GenericPush',
transport='File',protocol='XML',
  dataHandler='Tuple',options=[['symbol','/symbols/symbol[last()]/name'],['points','/symbols/symbol[last()]
/points']],
  schema=[
    ['symbol','String'],
    ['points','Double'] ]
})
```
