Twitter transport handler

The Twitter transport handler allows the processing of Tweets from Twitter. Processing is done by: http://twitter4j.org/en/index.html

Odyssseus needs for processing an access token and a consumer key.

https://dev.twitter.com/oauth/overview/application-owner-access-tokens

Options

- `consumerKey:` The Twitter Consumer Key
- `consumerSecret`: The Consumer Secret
- `accessToken`: The Twitter Access Token
- `accessTokeSecret`: The Token Secret

Example

```
informatikOldenburg := TWITTERSOURCE({
                            source='twitterOldenburgInformatik',
                            consumerkey='XXX',
                            consumersecret='XXX' ,
                            ACCESStoken='XXX',
                            ACCESStokensecret = 'XXX' ,
                            searchkeys = ['Oldenburg','Informatik'
]
                          }
                        )
```
