

HDFS transport handler

File reference to a Hadoop Filesystem (wrapper feature must be installed)

Options

- **fs.default.name**: The name of the Hadoop filesystem
- **Filename**: The path to the file
- **append**: append values to end of file. If set to false (default) the values are overwritten.

```
#PARSER PQL
#RUNQUERY
input = ACCESS({source='Source',
wrapper='GenericPull',
transport='hdfs',
protocol='csv',
dataHandler='Tuple',
Internship 2015
options=[['fs.default.name','hdfs://master:9000'],
['username','hduser'],['Filename', '/user/sorted_data.csv'],
['append','false']],
schema=[
['1', 'String'],
['2', 'String'],})
```

```
output = SENDER({sink='Sink',
wrapper='GenericPush',
transport='hdfs',
protocol='CSV',
dataHandler='Tuple',
options=[['fs.default.name','hdfs://master:9000'],
['username','hduser'],['Filename', '/user/sorted_data.csv'],
['append','false']]
}, input)
```
