

# Document protocol handler

The Document protocol handler parses complete text documents.

## Options

- **delay**: Delay of reading in milliseconds (default 0).
- **nanodelay**: Delay of reading in nanoseconds (default 0).
- **oneDocPerCall**: If set to true (default) there will be an complete open/process/close call on the underlying transporthandler for each new element. If set to false, the source (transporthandler) will only be called once.

## Example

### PQL

#### Document Protocol Handler

```
input = ACCESS({source='document', wrapper='GenericPush',
transport='File',protocol='Document',
  dataHandler='Tuple',options=[['delay','100']],
  schema=[
    ['content','String']]
})
```

### CQL

#### Document Protocol Handler

```
CREATE STREAM document (content String)
  WRAPPER 'GenericPush'
  PROTOCOL 'Document'
  TRANSPORT 'File'
  DATAHANDLER 'Tuple'
  OPTIONS ( 'delay' '100')
```
