

XmlRpcEnrich

This operator act similar to the [WSEnrich operator](#) but only calls an external xml-rpc server. Although, [WSEnrich operator](#) can do this, too. It is better to use this operator as the handling is easier.

```
#PARSER PQL
#RUNQUERY
timer = TIMER({
    period = 1000,
    source = 'timer'
})

mapped = MAP({
    expressions = [
        ['1','a'],
        ['1','b']
    ],
    keepinput = true
},
timer
)

enriched = XmlRpcEnrich({
    url = 'http://localhost:8000/RPC2',
    datafields = [['result', 'Integer']],
    arguments = ['a','b'],
    operation = 'add'
},
mapped
)
```
